Lease-Trade-Exchange-Module Exchange

ENGINE LEASE

Lease-Trade-Exchange- Module Exchange

Flexible engine and module
availability solutions that keep your
fleet flying

OVERVIEW

IAI's Aviation Group delivers comprehensive engine availability solutions that minimize downtime and financial exposure during maintenance events. With 20+ years of leasing experience and full in house MRO capabilities, IAI maintains a high quality engine pool backed by robust maintenance oversight, engine health management, and proven technical expertise ensuring worry free utilization.

ENGINE LEASING

Flexible short and long term leases tailored to operational needs: ideal for scheduled shop visits, unscheduled removals, AOG events, and long term fleet support.

Benefits: large, diverse pool for immediate availability; global hubs for rapid deployment; 24/7 operational & technical support; options tailored to your profile; engines maintained by IAI's in house MRO.

ENGINE TRADE & EXCHANGE

Keep flying while avoiding immediate shop visits and preserving asset value. IAI's repair expertise and extensive pool enable fast turnaround and predictable outcomes whether you need fresh from shop or continued time engines.

Options: sale or exchange from a large pool; tailor made exchange programs aligned to operational and commercial goals.

MODULE EXCHANGE SOLUTIONS

A fast, cost effective alternative to full engine replacement: swap only the required modules to reduce turnaround, lower life cycle costs, and minimize disruption. All modules are repaired and qualified in house to strict technical standards and integrate seamlessly with lease and exchange programs.

Benefits: shorter TAT vs. full replacement; reduced costs; improved operational flexibility; asset value preservation.

WHY IAI

Unlike pure lessors, IAI combines leasing with deep in house MRO, controlling the full maintenance process for consistent quality, reliable performance, and strong asset management over the engine life cycle. Customers gain proactive availability planning, experienced engineering support, flexible commercial structures, and a long term partnership focus.
