# HAROP

Long Range Loitering Munition

# HAROP

## Long Range Loitering Munition

### GENERAL

Combining the characteristics of a UAV and a missile, HAROP remains a formidable loitering munition equipped to hunt high-value targets like unmanned surface vessels, command posts, supply depots, tanks, and air defense systems.

Using its electro-optic seeker and without prior intelligence, HAROP has a 9-hour endurance to seek targets in a designated area, locate and identify them, plan an attack route, then pursue the strike from any direction at a shallow or steep dive. HAROP overcomes challenges in communication with its immunity to GNSS jamming.

As a guided weapon system, HAROP is supervised by remote human-in-the-loop mission control and may be aborted if required. Launched from canisters mounted on trucks or naval vessels, HAROP is easily deployed from diverse terrains and environments.

### HIGHLIGHTS

- Remarkable and unmatched mission success in combat
- Extended loitering at long ranges
- Multi-purpose, multi-mission – land and naval applications
- Autonomous platform operation
- Man-in-the-loop attack, avoiding collateral damage
- EO/IR seeker
- Full hemispherical angle of strike
- Attack and abort capability
