WIND DEMON

Affordable Long Range Air-to-Surface Cruise Missile

GENERAL

WIND DEMON is IAI's long range air-to-surface cruise missile designed to neutralize a wide array of targets at great distances with minimal resources.

The WIND DEMON is fired from an airborne platform, e.g. a helicopter, and follows a predetermined mission plan to attack a moving or stationary target at a range of 250 km. Cruising at remarkably low altitudes, the WIND DEMON avoids detection, disruption, and interception. Operators may select fast/slow/fast speed profiles which allow high-dash speed reactions or slow-velocity approaching of points of interest, all designed for the element of surprise and elusion.

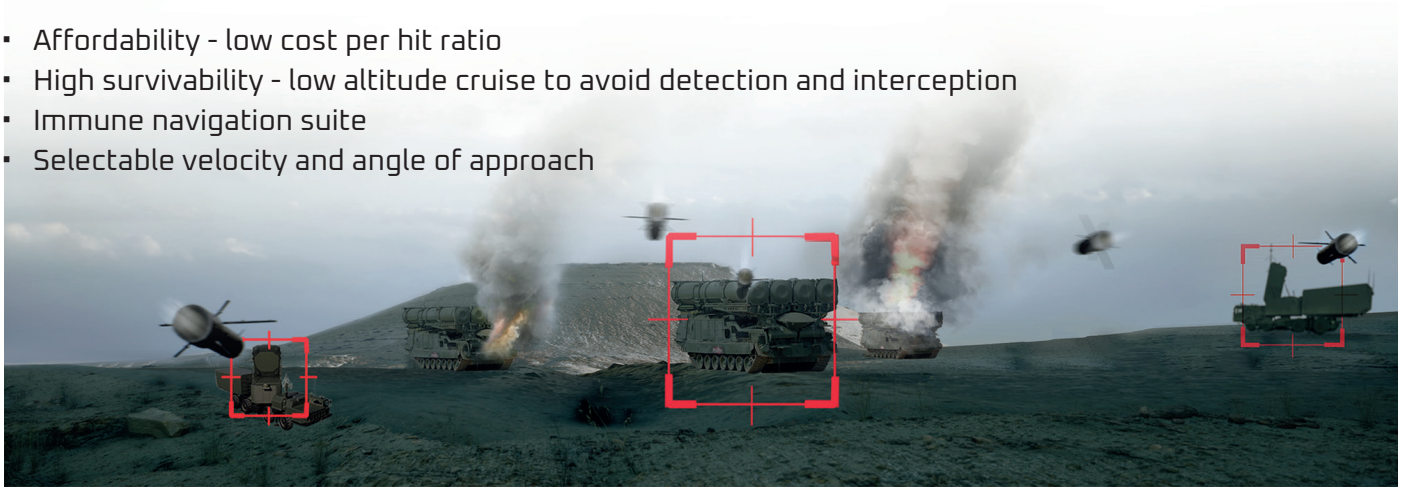

WIND DEMON is the answer to customer needs for a reliable air-to-surface missile which stops targets in their tracks at a uniquely low cost per hit ratio.

TECHNICALS

- Range: 250 km
- Weight: 140 kg
- CEP: 1 m
- Electro-optic (EO) seeker: Imaging Infrared (IIR), HD VIS, Semi-Active Laser Homing, with Automatic Target Recognition (ATR) and Man-In-The-Loop control

HIGHLIGHTS

- Affordability - low cost per hit ratio
- High survivability - low altitude cruise to avoid detection and interception
- Immune navigation suite
- Selectable velocity and angle of approach
